

**Planning in a new dimension.  
Endless possibilities.**

**Uponor**

**The Uponor BIM Platform**

# ➤ **Library, tools and service. All combined in one place.**

## **The Uponor BIM Platform**

The impact of digitization is profoundly changing the way construction projects are executed. Whether for buildings or infrastructure projects – Building Information Modeling (BIM) is the shape of digital planning to come. At Uponor, we are actively moving this process forward by providing all Uponor BIM solutions for your daily work in a single place. Our BIM platform provides access to relevant product data, intelligent tools and

design services by a team of experienced BIM specialists. Equipped with additional user-friendly features, we have created a digital environment that helps you to perform your daily design tasks more efficiently and at a higher quality.

## Higher efficiency

Speed up work-tasks by automating the use of information.

## Better planning

Execute design effectively and at a higher quality.

## Streamlined data exchange

Improve communication and collaboration processes.

## Easy availability

Access the latest BIM data and tools from one central source – anywhere and anytime.

## Safer designing

Reduce the risk of costly construction errors with always up-to-date BIM solutions.

## Multilingual adaptation

Profit from BIM models, recent data and information available in different languages as well as a country-specific portfolio.

# BIM

## Latest information. Just a click away. The Uponor BIM Library

Easy access to the latest product data is the key to efficient design. Uponor's library contains BIM models of our entire product range. The intuitive browsing and previewing of BIM models facilitate daily work, while easy access to data in multiple languages helps you quickly retrieve information. Our library is based on the openBIM standard, which enables seamless data exchange across your entire collaboration network.

### Compatible technology

Support of multiple CAD and BIM formats (Revit, IFC, DXF, SAT, DWG 3D & 2D, FBX, OBJ).

### Enriched models

The integration of smart functions, multiple sizes and product variants in a single BIM model.

### Reliable data

Our BIM library meets the requirements of BS8541, ETIM and openBIM standards. A data-driven engine ensures that information is always up-to-date.

### Easy access

Our entire product range is available via the BIM library.

# Intelligent features. Customized solutions. The Uponor BIM Tools

Integrating data into your BIM software is often one of the most challenging aspects of the entire design process. Uponor BIM tools support you in your work. They provide easy access to the latest and most accurate data from our entire product range. Intelligent features and automated functionalities will help you solve complex design problems, accelerate your design processes and improve the quality of your work. Our tools are compatible with the most widely used BIM software on the market and based on European design standards.

## Recent data

Uponor Product Information Management (PIM) systems, which are integrated into all tools, ensure that product data is always up-to-date.

## Multilingual solution

All tools available in different languages and in a country-specific portfolio.

## User-friendly

All features incorporate the experience of professionals to ensure the tools are easy to use.

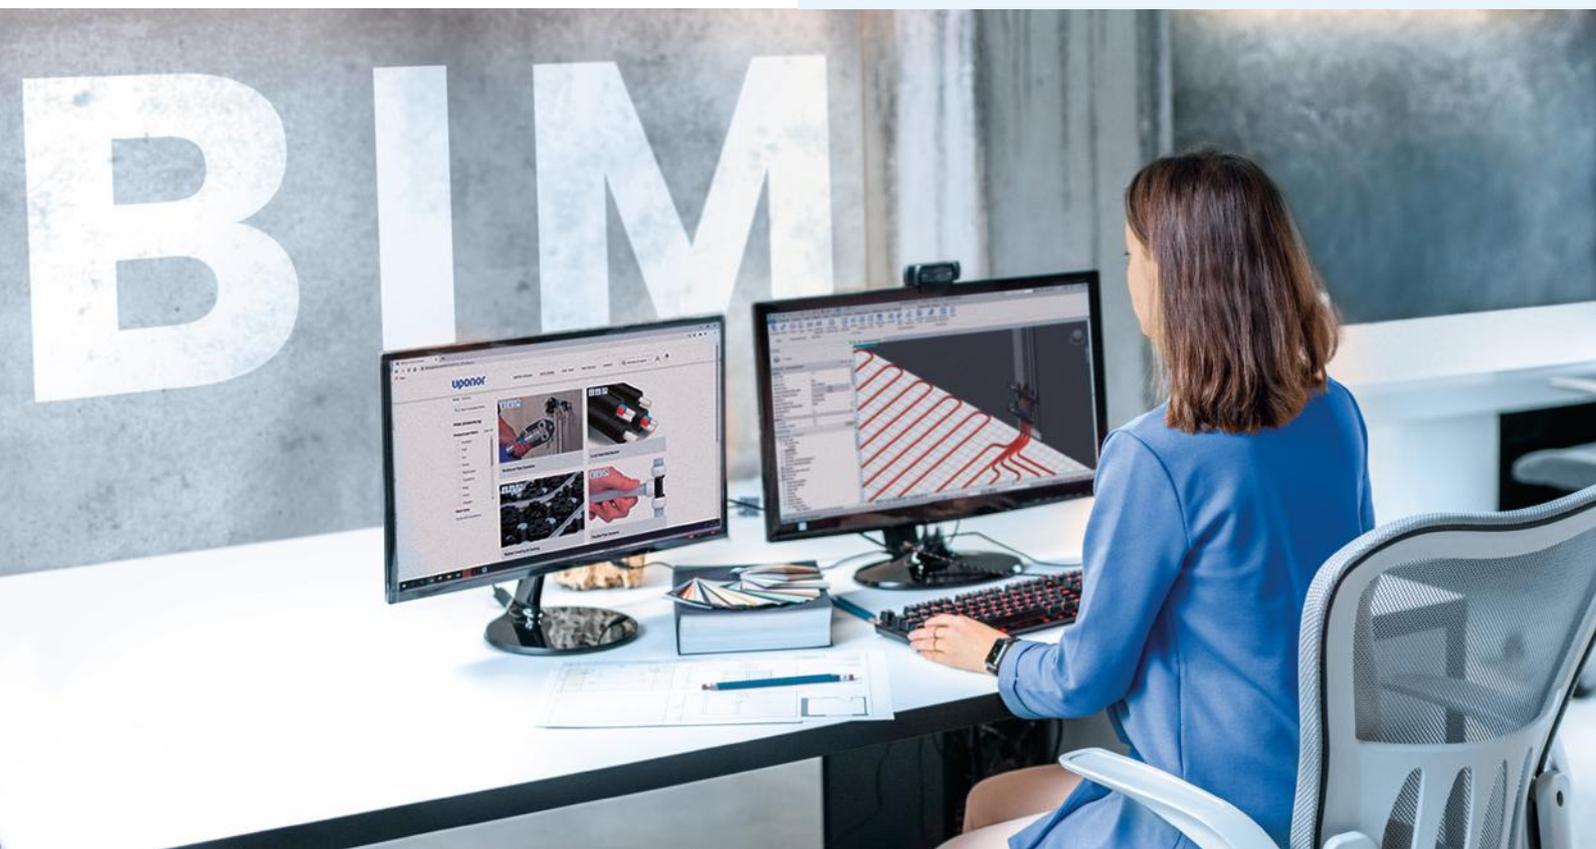

## Intelligent features

Automated functions simplify your daily work, accelerate processes and increase design quality.

## Reliable design

Based on European standards for Mechanical Electrical Plumbing (MEP) systems.

# BIM

## Planning excellence. Reliable support. The Uponor BIM Service

Are you looking for an experienced partner that supports you in every phase of your BIM project? Our BIM service team is ready to assist you with its extensive knowledge of Uponor products and many years of experience in BIM projects. Benefit from cooperating with our service team and lay the foundation for a successful project.

### Expert know-how

BIM service team with an extensive background in HVAC and the design of plumbing systems.

### Technical excellence

BIM specialists guarantee the delivery of your project with the highest quality and technical precision.

### Individual support

BIM service that is tailored to your needs and flexible assistance throughout the entire project lifecycle.

### Greater accuracy

Unified BIM design service based on European standards.

### Time savings

Professional team that accelerates design projects, solves complex design issues and helps you meet your deadlines.
